
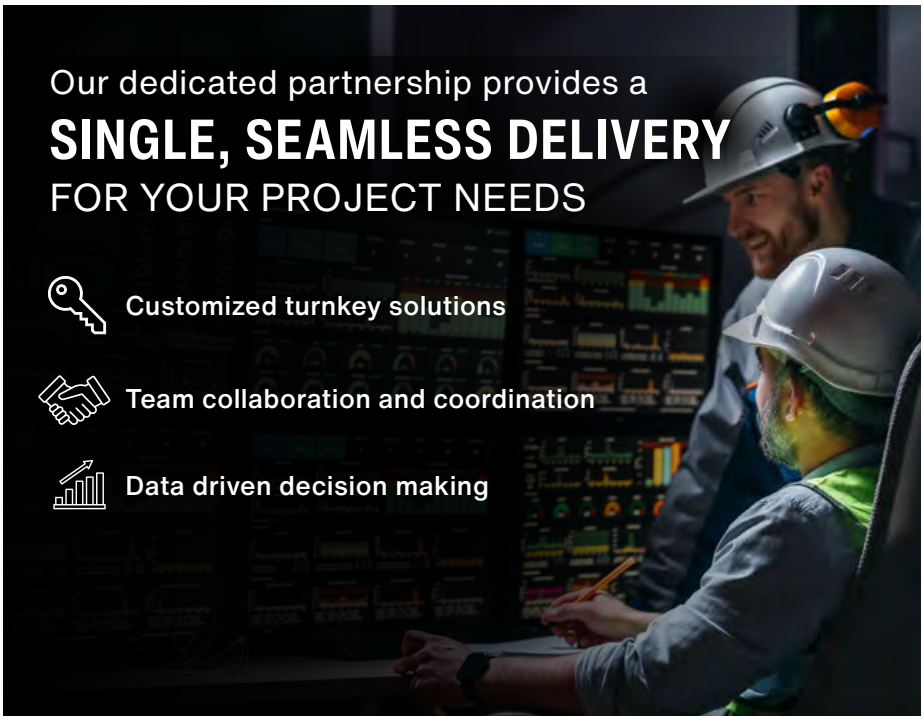
AUTOMATION & SYSTEMS INTEGRATION

Instrumentation & Control and SCADA Services

The rapid advancement of new systems and technologies are creating a world that is more connected, complex, and challenging. Adapting to this disruption begins with understanding the process, with real-time insights that can drive smarter, faster decisions.

By connecting designers with integrators, data with technology, and innovation with impact, the RVA and Valley partnership delivers next-generation engineering solutions that enables clients to perform and transform continuously, operate with speed and agility, and manage risk with confidence.

As opposed to traditional programming and SCADA systems services that are carried out under the construction contract, the transition to a seamless integration of design and programming under a unified delivery model, will allow clients to reap the full benefits of their operations: from streamlined network interfaces, to faster implementation, and ultimately more robust and reliable automation systems for complex facility processes.



Featured Projects

WOODLEY LANE RESERVOIR UPGRADES

Client: City of Hamilton
Location: Hamilton, ON

HUMBER TREATMENT PLANT

Client: City of Toronto
Location: Toronto, ON

VILLAGE OF CARP W/WW FACILITIES UPGRADES

Client: City of Ottawa
Location: Ottawa, ON
